## 8 10/100/1000T + 2 10/100/1000T/ Dual speed SFP combo (8 PoE at/af) Industrial Unmanaged Switch

## User Manual

## Recommendation for Shielded network cables

STP cables have additional shielding material that is used to reduce external interference. The shield also reduces the emission at any point in the path of the cable. Our recommendation is to deploy an STP network cable in demanding electrical environments. Examples of demanding indoor environments are where the network cable is located in parallel with electrical mains supply cables or where large inductive loads such as motors or contactors are in close vicinity to the camera or its cable. It is also mandatory to use an STP cable where the power device (like IP camera) is used outdoors or where the network cable is routed outdoors.

## Troubleshooting <br> 21

## Overview

## Introduction

Lantech I(P)GS-0208C is a high performance all Gigabit switch with 8 10/100/1000T + 2 10/100/1000T/ Dual speed SFP combo (8 PoE at/af)

For latest product specifications, please refer to Lantech official site.

## Packing List

- $1 \times$ Industrial Ethernet Switch
- $1 \times$ Terminal Block
- $1 \times$ Quick Installation Guide

## Safety Precaution

Attention If DC voltage is supplied by an external circuit, please use a protection device on the power supply input.

## Hardware Description

For POE models: Do not use units' POE ports to uplink to another POE switch in vehicle applications. (May Cause Damage) Lantech strongly advise the installation of a Galvanic isolated DC/DC converter between the power supply and the Ethernet switch on all Non-Isolated models. Please contact the sales team for advice on which models support isolated power design.

> The SFP/Copper Combo port can't both work at the same time. The SFP port has the higher priority than copper port; if you insert the 1000M SFP transceiver (which has connected to the remote device via fiber cable) into the SFP port, the connection of the accompanying copper port will link down.
> If you insert the 1000M SFP transceiver into the SFP port even without a fiber connection to the remote, the connection of the accompanying copper port will link down immediately.

Note Using 100M SFP modules on this unmanaged switch may lead to SFP compatibility issues. Users are advised to verify compatibility in advance.

In this paragraph, we will introduce the Industrial switch's dimensions, port, cabling information, and wiring installation.

## Front Panel

The Front Panel of the switch is shown as below.

Front Panel of the Industrial Switch
(The PoE LED is only available on PoE models)

## Top View

The top panel of the Industrial Switch is equipped one terminal block connector of two DC power inputs.

Top panel of the Industrial Switch Converter

## Dimensions

. The dimensions are $74 \times 152 \times 105 \mathrm{~mm}(\mathrm{~W} \times \mathrm{H} \times \mathrm{D})$. The figure below gives the dimensions and views of each side of the Industrial Switch.

## Wiring the Power Inputs

- Voltage of Power Input

| IPGS-0208C-12V | 12V model: <br> The power input voltage can <br> be from 9.5V to 56VDC to <br> feed power on both the <br> 802.3af and 802.3at <br> standardized devices. |
| :--- | :--- |
| IPGS-0208C-24V | 24V model: <br> The power input voltage can <br> be from 9V to 36VDC to feed <br> power on both the 802.3af <br> and 802.3at standardized <br> devices. |
| IPGS-0208C-48V | 48V model: <br> The power input voltage can <br> be from 45V to 56VDC to feed <br> power on both 802.3af/at <br> standardized devices. |
| IGS-0208C-12V | 12V model: <br> The power input voltage can <br> be from 9.5V to 60VDC |
| IGS-0208C-24V | 24V model: <br> The power input voltage can <br> be from 9V to 36VDC |

Please make sure that the external power supply unit you use to provide the PoE voltage meet the following criteria: The power consumption can satisfy the total power request from all PD devices required.

Please follow the steps below to insert the power wire.

1. Insert the positive and negative wires into the $V+$ and $V$ - contacts on the terminal block connector.

2. To tighten the wire-clamp screws for preventing the DC wires to loose.
[^0]
## LED Indicators

The LED indicators located on the front panel display the power status and network status of the Industrial switch; each has their own specific meaning as the table shown below.

| LED | Color | Description |  |
| :---: | :---: | :---: | :---: |
| P1 | Green | On | Power input 1 is active |
|  |  | Off | Power input 1 is inactive |
| P2 | Green | On | Power input 2 is active |
|  |  | Off | Power input 2 is inactive |
| Fault | Red | On | Power input 1 or 2 is inactive |
|  |  | Off | Power input 1 and 2 are both functional, or no power inputs |
| $1 \sim 8$ <br> LNK/ACT <br> (Upper LED) | Green | On | Connected to network |
|  |  | Flashing | Networking is active |
|  |  | Off | Not connected to network |
| $1 \sim 8$ <br> Speed <br> (Lower LED) | Yellow | On | Connected to network at speed of 1000Mbps |
|  |  | Off | Not connected to network or not working at speed of 1000Mbps |
| $9 \sim 10$ <br> LNK/ACT | Green | On | A network device is detected. |
|  |  | Blinking | The port is transmitting or receiving packets from the TX device. |
| $\begin{aligned} & 9 \sim 10 \\ & \text { Speed } \end{aligned}$ | Yellow | On | Connected to network at speed of 1000Mbps |
|  |  | Off | Not connected to network or not working at speed of 1000Mbps |
| PoE <br> (IPGC only) | Green | On | Link to PD(PoE device) |
|  |  | Off | Link to none PoE device |

## RJ-45 Pin Assignments

The UTP/STP ports will automatically sense for Fast Ethernet (10Base-T/100Base-TX) or Gigabit Ethernet (10Base-T/100Base-TX/1000Base-T) connection. Auto MDI/MDIX means that the switch can connect to another switch or workstation without changing straight through or crossover cabling. See the figures below for straight through and crossover cable schema.

■ 10/100Base-TX Pinouts

| Pin Number | Assignment |
| :---: | :---: |
| 1 | Tx+ |
| 2 | Tx- |
| 3 | Rx+ |
| 6 | Rx- |

Note " + " and "-" signs represent the polarity of the wires that make up each wire pair.

The table below shows the 10Base-T/100Base-TX MDI and MDI-X port pinouts.

| Pin Number | MDI-X Signal Name | MDI Signal Name |
| :---: | :---: | :---: |
| 1 | Receive Data plus (RD+) | Transmit Data plus (TD+) |
| 2 | Receive Data minus (RD-) | Transmit Data minus (TD-) |
| 3 | Transmit Data plus (TD+) | Receive Data plus (RD+) |
| 6 | Transmit Data minus (TD-) | Receive Data minus (RD-) |

Switch Router or PC

Crossover Cable Schema

- 10/100/1000Base-T Pinouts

The table below describes the gigabit Ethernet RJ-45 pinouts.

| Pin | Signal name | Description |
| :---: | :---: | :---: |
| 1 | BI_DA+ | Bi-directional pair A+ |
| 2 | BI_DA- | Bi-directional pair A- |
| 3 | BI_DB+ | Bi-directional pair B+ |
| 4 | BI_DC+ | Bi-directional pair C+ |
| 5 | BI_DC- | Bi-directional pair C- |
| 6 | BI_DB- | Bi-directional pair B- |
| 7 | BI_DD+ | Bi-directional pair D+ |
| 8 | BI_DD- | Bi-directional pair D- |

## - 10/100/1000Base-T Cable Schema

The following two figures illustrate the 10/100/1000Base-T cable schema.

Straight Through Cable Schema

Crossover Cable Schema

## Cabling

■ Use unshielded twisted-pair (UTP) or shielded twisted-pair (STP) cable for RJ-45 connections: $100 \Omega$ Category 3, 4 or 5 cable for 10 Mbps connections, $100 \Omega$ Category 5 cable for 100 Mbps , or $100 \Omega$ Category 5e/above cable for 1000 Mbps connections. The cable between the switch and the link partner (switch, hub, workstation, etc.) must be less than 100 meters ( 328 ft .) long.

■ Fiber segment using single-mode connector type must use9/125 $\mu \mathrm{m}$ single-mode fiber cable. User can connect two devices in the distance
up to 30 km .

- Fiber segment using multi-mode connector type must use 50 or 62.5/125 $\mu \mathrm{m}$ multi-mode fiber cable. User can connect two devices up to 2kmdistances.

## ■ Gigabit SFP port:

The small form-factor pluggable (SFP) is a compact optical transceiver used in optical communications for both telecommunication and data communications. The SFP slots supporting Gigabit speed up to 1000 Mbps . They are used for connecting to the network segment with single or multi-mode fiber. You can choose the appropriate SFP transceiver to plug into the slots. Then use proper multi-mode or single-mode fiber according to the transceiver. With fiber optic, it transmits at speed up to 1000 Mbps and you can prevent noise interference from the system.

To connect the transceiver and LC cable, please follow the steps shown below:

First, insert the transceiver into the SFP module. Notice that the triangle mark is the bottom of the module.

Transceiver to the SFP module

Second, insert the fiber cable of LC connector into the transceiver.

To remove the LC connector from the transceiver, please follow the steps shown below:

First, press the upper side of the LC connector to release from the transceiver and pull it out.

Remove LC connector

Second, push down the metal loop and pull the transceiver out by the plastic handle.

## Mounting Installation

## DIN-Rail Mounting

The DIN-Rail is screwed on the industrial switch when out of factory. If the DIN-Rail is not screwed on the industrial switch, please see the following pictures to screw the DIN-Rail on the switch. Follow the steps below to hang the industrial switch.

Rear Side

DIN-Rail

1. First, insert the top of DIN-Rail into the track.

2. Then, lightly push the DIN-Rail into the track.

3. Check if the DIN-Rail is tightened on the track or not.
4. To remove the industrial switch from the track, reverse above steps.

## Wall-Mount Plate Mounting

*Optional Wall Mount Kit required
Follow the steps below to mount the industrial switch with wall mount plate.

1. Remove the DIN-Rail from the industrial switch; loose the screws to remove the DIN-Rail.
2. Place the wall mount plate on the rear panel of the industrial switch.
3. Use the screws to screw the wall mount plate on the industrial switch.
4. Use the hook holes at the corners of the wall mount plate to hang the industrial switch on the wall.
5. To remove the wall mount plate, reverse the above steps.

## Hardware Installation

In this paragraph, we will describe how to install the 8-port
10/100/1000Base-TX Industrial Switch and the installation points for the attention.

## Installation Steps

1. Unpacked the Industrial switch.
2. Check the DIN-Rail is screwed on the Industrial switch. If the DIN-Rail is not screwed on the Industrial switch. Please refer to DIN-Rail Mounting section for DIN-Rail installation. If you want to wall mount the Industrial switch, then please refer to Wall-Mount Plate Mounting section for wall mount plate installation.
3. To hang the Industrial switch on the DIN-Rail track or wall, please refer to the Mounting Installation section.
4. Power on the Industrial switch. How to wire the power; please refer to the Wiring the Power Inputs section. The power LED on the Industrial switch will light up. Please refer to the LED Indicators section for meaning of LED lights.
5. Prepare the twisted-pair, straight through Category 5e cable for Ethernet connection.
6. Insert one side of Category 5e or above cable into the Industrial switch RJ-45 port and another side of category 5e or above cable to the network devices' RJ-45 port, ex: switch, PC or Server. The RJ-45 LED indicator on the Industrial switch will light up when the cable is connected with the network device. Please refer to the LED Indicators section for LED light meaning.
7. When all connections are all set and LED lights all show in normal, the installation is complete.

## Troubleshooting

- Verify that you are using the included or appropriate power cord/adapter. Don't use the power adapter with DC output higher than the power rating of the device. Otherwise, the device will burn down.
■ Select the proper UTP/STP cable to construct your network. Please check that you are using the right cable. Use unshielded twisted-pair (UTP) or shielded twisted-pair (STP) cable for RJ-45 connections: $100 \Omega$ Category 3,4 or 5 cable for 10 Mbps connections, $100 \Omega$ Category 5 cable for 100 Mbps , or $100 \Omega$ Category 5e/above cable for 1000Mbps connections. Also be sure that the length of any twisted-pair connection does not exceed 100 meters (328 feet).
- Diagnosing LED Indicators: The Switch can be easily monitored through panel indicators, which describes common problems you may encounter and where you can find possible solutions, to assist in identifying problems.
- IF the power indicator does not light on when the power cord is plugged in, you may have a problem with power cord. Then check for loose power connections, power losses or surges at power outlet. If you still cannot resolve the problem, contact your local dealer for assistance.
- If the Industrial switch LED indicators function normal and the connected cables are correct but the packets still cannot transmit, please check your system's Ethernet devices' configuration or status

[^0]:    Note The wire gauge for the terminal block should be in the range between 12~ 24 AWG.

    50-57VDC input is recommended for 802.3at 30W applications.
